

Warsha ورشة

"Warsha finishes your work safely, for the fairest price."

IDENTITY EVOLUTION — THE FRAME — 8 CONCEPTS, RANKED, PLUS A REFINED DIRECTION AND A FULL VISUAL SYSTEM

ROUND 2 — CLOSER TO THE CRAFT, WITH A HIDDEN W

The Frame, rooted in the work

Every Warsha trade — water, power, air, movement — shares one language: *flow through a system*. That's the honest way to signal the field without a single tool. In each mark below the W is structural, never decorative: you feel it before you notice it.

The Current

MY PICK

Field link — a flow line inside a protected frame: water through pipes, current through wiring, air through a unit. One shape covers every trade on the platform.

The W — a W concealed inside a flow line — the trace enters and exits the frame with uneven peaks, so it reads as movement through a system first and the letter is only felt underneath it.

Motion — the wave travels left to right inside the frame while work is in progress, then settles flat on completion.

The Plate

Field link — the softest possible echo of a fixture plate: the small, ordinary object every trade in the app touches inside a home.

The W — the two U-slots sit side by side and resolve into a W the moment you stop reading them as slots.

Motion — slots fill from the bottom as a job progresses; a natural progress indicator.

The Signal

Field link — a diagnostic reading held inside a round frame: the pulse of a system being checked and made healthy again.

The W — a sharper, more technical W than The Current — reads as a meter trace first.

Motion — the trace sweeps once, like a scan, then holds steady.

Recommendation — The Current. It keeps the Locket's protective frame (so nothing already decided is thrown away), adds an honest signal of the actual work, and conceals the W inside a flow line, so the letter is felt rather than spelled. It survives 16px, embroidery and a single-color stamp, and it gives you the most useful animation in the product: a live wave while a job is running, flat and still when it's done.

THE PHILOSOPHY

A frame is the smallest unit of protection: a boundary that says *what happens inside here is safe, verified, and complete*. Warsha's mark doesn't need to draw a house or a toolbox — it needs to answer, instantly, "can I trust this person inside my home?" Every concept below is a different geometric answer to that one question.

Eight executions of The Frame

01

The Corner

Philosophy — one corner of a frame, implying the rest without drawing it.

Symbolism — trust as an unfinished boundary the customer completes by hiring.

Emotional impact — quiet, architectural, slightly cold.

Customer trust — reads as UI chrome (a card corner) more than a promise.

Worker pride — low; too abstract to feel ownable on a uniform.

Strengths / weaknesses — extremely simple; but under-differentiated at small sizes.

Scalability — holds at 24px, disappears as a standalone avatar.

Animation — corner draws in on load.

Long-term potential — safer as a UI motif than the primary mark.

02

The Aperture

Philosophy — a frame that opens like a lens to let a verified worker in.

Symbolism — controlled access, not a closed gate — trust that lets light through.

Emotional impact — precise, premium, camera-like confidence.

Customer trust — high; reads as focus and clarity.

Worker pride — good; feels professional, not blue-collar.

Strengths / weaknesses — beautiful in motion; the iris-open idea has been used by camera and media brands before.

Scalability — excellent at every size, monochrome-friendly.

Animation — natural iris-open/close on splash and confirmation.

Long-term potential — strong runner-up.

03

The Seal

Philosophy — a thin outer frame with one thick arc, like wax pressed onto a letter.

Symbolism — verification and authenticity, without a literal badge shape.

Emotional impact — formal, official, reassuring.

Customer trust — very high; unmistakably reads "certified."

Worker pride — high; feels like a credential worth wearing.

Strengths / weaknesses — instantly legible; risks drifting toward generic "badge" iconography category.

Scalability — good, though the thin ring can vanish below 20px.

Animation — arc sweeps in to "stamp" on verification.

Long-term potential — strong for a verification badge, secondary to the primary mark.

04

The Threshold

Philosophy — two uneven posts framing an open doorway.

Symbolism — the moment a stranger safely enters your home.

Emotional impact — domestic, warm, human-scaled.

Customer trust — direct and honest about the real moment of risk.

Worker pride — moderate; the "invited guest" framing is flattering.

Strengths / weaknesses — evocative story; two vertical bars can misread as brackets or an equals sign.

Scalability — fine at large sizes, ambiguous under 32px.

Animation — posts rise to open the doorway.

Long-term potential — better as an illustration motif than the icon.

05

The Fold

Philosophy — a frame with one corner folded down, like a sealed document.

Symbolism — the transaction as a signed, closed agreement.

Emotional impact — official, transactional, calm.

Customer trust — good; implies paperwork/guarantee without text.

Worker pride — moderate; feels more "back office" than personal.

Strengths / weaknesses — clean geometry; close to note-taking/document app territory.

Scalability — solid at all sizes.

Animation — corner folds down to "seal" on payment confirmation.

Long-term potential — better suited to a receipt/quote icon than the brand mark.

06

The Halo

Philosophy — a protective ring wrapped almost fully around a solid center.

Symbolism — the person (customer or worker) held safely inside the platform.

Emotional impact — protective, calm, slightly maternal.

Customer trust — very high; the "protected dot" is immediately warm.

Worker pride — high; being "the one at the center" feels dignifying.

Strengths / weaknesses — emotionally strongest concept; geometry alone is close to generic "orbit" icons used broadly.

Scalability — excellent, reads clearly even at 16px.

Animation — ring closes around the dot on successful match.

Long-term potential — top-tier; closest emotional runner-up to the winner.

07

The Ledger Tick

Philosophy — a checkmark built from two solid bars, like a line item confirmed.

Symbolism — fair pricing and completed work, verified.

Emotional impact — efficient, transactional, trustworthy.

Customer trust — good; unambiguous "approved" reading.

Worker pride — moderate; feels transactional rather than personal.

Strengths / weaknesses — extremely clear; checkmark language is heavily used across fintech, low ownability.

Scalability — excellent at every size.

Animation — bars draw in sequence to complete the tick.

Long-term potential — better as a success-state glyph than the brand mark.

08

The Locket

ROUND 1 WINNER

Philosophy — a frame nested inside a frame: the outer boundary is the platform, the inner solid form is the job, held and protected.

Symbolism — layered protection — identity verified, payment secured, work guaranteed — collapsed into one shape.

Emotional impact — calm, deliberate, quietly premium.

Customer trust — highest of all eight; nesting reads as "protected" before any conscious thought.

Worker pride — highest; the mark feels like a seal of craftsmanship, not a corporate logo.

Strengths / weaknesses — the most literal "Frame" execution and the most ownable; only weakness is it must stay perfectly square to avoid reading as a generic app-icon tile.

Scalability — flawless from 16px to a billboard; two rounded rects, nothing to lose.

Animation — outer frame draws first, inner form locks into place a beat later.

Long-term potential — the strongest 20-year mark: no trend dependency, embroiders and engraves cleanly, works identically in monochrome or full color.

Ranking — Round 1

Superseded by Round 2 above; kept as the record of how the direction was reached.

1	The Locket	most literal, most ownable Frame execution — nested protection in one shape.
2	The Aperture	premium reveal motion; slightly less unique as a static mark.
3	The Halo	strongest emotional warmth; geometry alone reads a bit generic.
4	The Seal	instant 'certified' read; best as a verification badge, not the primary mark.
5	The Ledger Tick	clear and fast; checkmark language is common across fintech.
6	The Fold	elegant seal-of-agreement idea; leans toward document-app territory.
7	The Threshold	evocative story; two bars can misread as brackets at small sizes.
8	The Corner	simplest, but too minimal alone to be memorable as a standalone mark.

THE RECOMMENDATION

The Current

The Locket won Round 1 on pure geometry, and The Current keeps its protective frame intact — then earns the extra half-second of recognition by saying something true about the work: a system flowing correctly again. The trace enters and leaves the frame, so

the W lives underneath the movement rather than sitting in a box. It holds at 16px, embroiders in one thread, engraves on a van door, and gives the product its most useful animation: a live wave while a job runs, flat and still when it's finished.

Visual identity system

Built around The Current.

SPACING SYSTEM (4px base)

4	
8	
12	
16	
24	
32	
48	

CORNER RADIUS SYSTEM

6 / 10 / 16 / 22 / full-round — small controls to hero cards.

ELEVATION

Level 1 — resting

Level 2 — card

Level 3 — modal / sheet

Depth comes from soft, low opacity shadows and a whisper of border light — never gloss, never blur-glass.

MOTION PRINCIPLES

- Calm, confident easing (cubic-bezier 0.4, 0, 0.2, 1). No bounce, no overshoot.
- Durations stay short: 150–250ms for UI, 400–600ms for the frame lockup itself.
- The mark always builds outside-in: the frame draws first, the wave flows through a beat later.
- Loading state is the frame alone with the wave travelling through it — never a spinner.
- Nothing rotates for effect; motion only ever communicates a state change.

ICONOGRAPHY

Single 1.6px stroke, fully rounded joins, no fill, no color — category glyphs (water, power, cleaning, general) stay abstract and calm, never illustrative.

ILLUSTRATION STYLE

Single-weight linework only, no color fill, no faces — people and tools reduced to geometric silhouettes so nothing reads as a stock-photo trade cliché.
